Aloe Vera Gel – Nature's Gift

Dr Sylvia Chukwuemeka

Aloe Vera is a medicinal herb that has been used by mankind for thousands of years. It has acquired the nicknames 'nature's gift', 'the miracle plant', 'the potted physician' and many more, with good reason. It has stood the test of time and its use is on the increase as it becoming accepted in complementary well as conventional healthcare environments.

FLP Aloe Vera Gel is as close to the inner leaf gel of the live plant as is possible. This is due to the high concentration, purity and the unique stabilization process applied to it, making it extremely effective. It has numerous benefits, each of which has a clear scientific explanation. The 3 main areas of benefit are as follows:

1. It has been called 'nature's finest vegetable juice' as it contains a wealth of nutritional components thus promoting health and addressing nutritional deficiencies. It can be thought of as 'complex nutrition in perfect balance' and the rich cocktail of nutritional elements produces a more powerful effect than would be expected if the individual components were taken separately.
2. It has beneficial effects on epithelial tissue (surfaces and membranes in the body) including the skin, digestive tract, linings of the lungs and sinuses. Healing is promoted because the Aloe Vera provides micronutrients, reduces infection, has an anti-inflammatory action and promotes cell growth, repair and regeneration.
3. It balances the immune system by 'fine-tuning' it so that we are more efficient in defending the body from attack, (particularly important with the numerous bacteria and viruses circulating in the winter) but also so that excessive or inappropriate actions of the immune system do not cause damage as in hypersensitivity or auto-immune conditions. This is a vital role and by looking after the 'Inner doctor' that is our immune system, we can minimise the need for conventional medical intervention.

Aloe Vera is not just for people with ailments or problems. Many people experience an improved sense of wellbeing as the Aloe can provide the body with what it is lacking. It is an excellent 'health insurance policy', providing the body with nutrients so that users not only feel well now but stay well in the future. Aloe Vera Gel can therefore play a vital role in managing a number of conditions as well as in improving general health and wellbeing.
